

M.J. Reider Associates, Inc.

PADEP Certified & NELAC Accredited Environmental Testing Laboratory

By now, you have no doubt heard of the EPA's recommendation to test for PCBs in caulking used in the building of many schools. PCBs, or Polychlorinated Biphenyls, are cancer causing chemicals once used in construction and electrical materials. With 57 years of analytical experience, M.J. Reider Associates, Inc. is fully certified by the state of Pennsylvania to test

for these chemicals. Additionally, MJRA is state certified to test for lead in materials such as paint or artificial turf. Lead continues to remain a major concern as it causes many adverse health effects. Concurrently, MJRA also has the ability to test wipes of areas such as window sills or counter tops for these contaminants, as both can be contained in dust particles. Our team of skilled samplers can even come to your facility to properly collect and deliver a sample to our laboratory for PCB or lead analysis. Call or visit M.J. Reider Associates, Inc. and allow us to put your parent's, student's, and faculty's concerns at ease.
